Why you should join a darts team

Darts is For Everyone

There are literally no physical requirements to become even a pro level darts player you just have to be committed and try your best. Consistency is key, all you have to do is play and learn from your mistakes.

Dart Anatomy

1. Flight
Flights are the fan shaped end of the dart that gives it stability and causes it to spin during flight.

2. Stem
Stems are plastic pieces with a cross incision which the flights insert into and a bottom which screws into the barrel.

3. Barrel
The barrel is the metal part of the dart that you grip when throwing, they give darts their weight and balance.

4. Tip
Sharp metal point that sticks into the board.

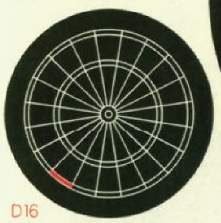

Checkouts Explained

The basic gist of checkouts is if you're on an odd number you want to hit another odd to even it out to get to your checkout.

Common Checkouts

Tops
D20

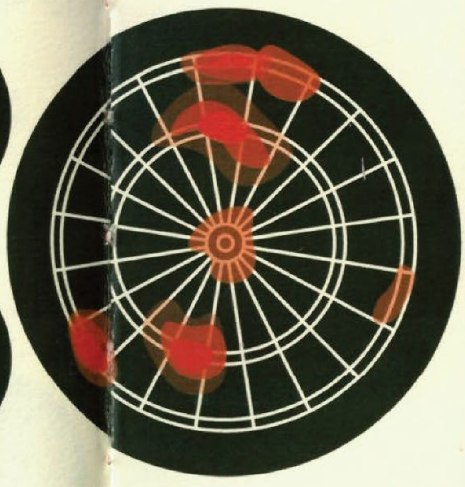

D16

D1

Heatmap

This is a vague map of where people usually hit on the board. Note the largest signatures around the triple 20 and triple 19 with a few others on common check-outs like tops and double 16.

Big Fish

170lbs

The best of the best in checkouts, a total score of 170 from 2 treble 20s and a bullseye, always tied off with a reeling in celebration.
